COMP5047 Applied Software Engineering - Week 3
Student Subsystem - Use Case Model

ACTOR
Student

Use cases:

1. Authenticate Student
2. Manage Lifestyle Profile
3. Manage Tenancy Contract
4. Access Room/Building
5. Manage Visitor Pass
6. Request Temporary Amenity
7. Report Maintenance Issue
8. Track Maintenance Ticket
9. Provide Repair Feedback
10. Collect Parcel
11. Book Facility
12. Manage Laundry
13. Use AI Assistant
14. Contact Warden
15. Respond to Emergency
16. Complete Move-In Inspection
17. Complete Move-Out Inspection
18. View/Dispute Deposit Charges
19. View Payment Information
20. Make Payment

Selected Use Case:

Report Maintenance Issue

Use Case Description:

Actor: Student
Purpose: This allows a student to report a maintenance problem about their accommodation
Precondition: The student is using the UniDorm Student Mobile Application
Main Flow:

1. Student selects the maintenance reporting function
2. Student describes the maintenance problem
3. Student adds a photo, video or a text description
4. Student submits a report
5. The system creates a maintenance ticket
6. The system confirms the submission

Alternative Flow: If the submission fails, the system informs the student and allows them to try again.

UML Use Case Diagram Plan

System: UniDorm Student Mobile Application
Actor: Student

Student -

- Authenticate Student
- Manage Profile
- Access Room/Building
- Manage Visitor Pass
- Report Maintenance Issue
- Track Maintenance Ticket
- Book Facility
- Collect Parcel
- Make Payment
- Respond to Emergency

Actor Connection
Student - all 10 use cases

UML Diagram Structure

System boundary: UniDorm Student Mobile Application
Actor: Student
Student is connected to:

- Authenticate Student
- Manage Profile
- Access Room/Building
- Manage Visitor Pass
- Report Maintenance Issue
- Track Maintenance Ticket
- Book Facility
- Collect Parcel
- Make Payment
- Respond to Emergency
